ABSTRACT

Different forms of competition arise in presence of different forms of scarce resources. Foraging as a dynamic biological competition, positioning as a sequential spatial competition, and an agrarian duopoly as a Stackelberg agrarian competition, are investigated in this dissertation, *Three Essays on Game Theory*, with a game-theoretic point of view. It consists of three chapters.

Chapter I, *Evolutionarily Stable Strategies in Dynamic Foraging*, presents a model of foraging as a simple non-cooperative dynamic game for biological resource with perfect and complete information. We extend Mazalov (1997) to the scenario for two animals of different foraging rates so as to differentiate intra- and inter-specific foraging behaviors. A novel solution is provided in explicit form. We also extend Mazalov (1997) to the scenario for N animals with consideration of time-consuming inter-patch movement so as to study intra-specific foraging behavior in large population. An implicit ESS solution is obtained. Emphasis is put on analysis of the situation of large population.

Chapter II, *Sequential Spatial Competition with Protection Barrier and Triggered Purchase Intention*, is a theoretical investigation of positioning as a sequential location game. We extend Prescott and Visscher (1977) to include protection barrier and triggered purchase intention, and to the positioning situation that the number of potential entrants is determined exogenously. We explore the details of optimal positioning study all the possible equilibria under various situations. The best response of players to suboptimal strategies of the previous players and positioning as a tool to deter new entry are investigated. Markets of horizontal spaces with and without extreme points are examined.

Chapter III, *Share Tenancy in a Two-landlord Duopoly*, is a theoretical exploration on share tenancy and other contractual forms of tenancies in an agrarian two-landlord duopoly as a Stackelberg agrarian game. We extend Yeung (2004) to the scenario of two-landlord duopoly. The efficiency and effectiveness of various forms of tenancies under different supply of land and farmers and under non-identical farmers are investigated. We examine under which situation various forms of tenancies coexist, under which situation a single form of tenancy predominates. Optimal forms of tenancies and the equilibria in the two-landlord economy are obtained. In particular, share tenancy is shown to be a form of price-discrimination even under a two-landlord duopoly.

TABLE OF CONTENTS

DECLARATION	i
ABSTRACT	ii
ACKNOWLEDGMENTS	iii
TABLE OF CONTENTS	iv
CHAPTER I	
EVOLUTIONARILY STABLE STRATEGIES IN DYNAMIC FORAGING	1
I.1 Introduction	1
I.2 Optimal Foraging Theory	4
I.3 Foraging as a Dynamic Biological Competition	6
I.3.1 Elements of the Dynamic Foraging Game	7
I.3.2 Setting of the Dynamic Foraging Game	10
I.4 Optimal Foraging and ESS Analysis	12
I.4.1 Case of Two Patches and Two Players	13
I.4.2 Case of Two Patches and N Players	18
I.5 Special Analysis	24
I.5.1 Effect of Size of Population	25
I.5.2 Very Large Population Analysis	25
I.6 Discussion	27
I.7 Concluding Remarks	30
Appendix to Chapter I	
A.I.1 Summary of the Foragers' Expected Payoff	32
A.I.2 Proof of Proposition I.5.1.1	33
A.I.3 Proof of Theorem I.5.1	35
CHAPTER II	
SEQUENTIAL SPATIAL COMPETITION WITH PROTECTION BARRIER AND TRIGGERED PURCHASE INTENTION	39
II.1 Introduction	39
II.2 Brief Survey on Spatial Competition	42
II.3 Positioning as a Sequential Spatial Competition	45
II.3.1 Elements of the Sequential Location Game	46
II.3.2 The Basic Model	53
II.4 Analysis	60
II.4.1 The Market with Extreme Points	61
II.4.2 The Market without Extreme Points	81
II.5 Discussion	85
II.6 Concluding Remarks	88
Appendix to Chapter II	
A.II.1 Review of Prescott and Visscher (1977)'s Solution	91
A.II.2 Summary of Scenarios for the Market with Extreme Points	93
A.II.3 Summary of Scenarios for the Market without Extreme Points	99

CHAPTER III	
SHARE TENANCY IN A TWO-LANDLORD DUOPOLY.....	103
III.1 Introduction.....	103
III.2 The Theory of Sharecropping and Agrarian Tenancy	104
III.3 Two-landlord Duopoly as a Stackelberg Agrarian Competition	107
III.3.1 Elements of the Stackelberg Agrarian Game	108
III.3.2 The Basic Setting	109
III.4 Analysis of Various Forms of Tenancies.....	115
III.4.1 Influence of Supply of Land and Farmers	116
III.4.2 Using More than One Tenancy	125
III.4.3 Using a Synthesized Contract	133
III.5 Stackelberg Agrarian Competition.....	140
III.5.1 The Two-landlord Setting	141
III.5.2 The Stackelberg Agrarian Game	146
III.5.3 More Complicated Situation.....	151
III.6 Discussion.....	153
III.7 Concluding Remarks.....	156
LIST OF REFERENCES	158
CONFERENCE ATTENDED.....	168
CURRICULUM VITAE.....	169
