**Mechanistic Study of Chinese Herbal
Medicines on Melanogenesis and Anti-Melanoma Effects**

TSANG Ting Fung

A thesis submitted in partial fulfilment of the requirements

for the degree of

Doctor of Philosophy

Principal Supervisor: Prof. Wen Luan Wendy HSIAO

Hong Kong Baptist University

2013

Abstract:

Melanogenesis is a physiological process of melanin production in response to UV exposure, which is modulated through multi-signaling pathways including cAMP/PKA, Wnt/ β -catenin and MAPK signaling cascades. However, deregulation of the melanogenic process might trigger the onset of skin cancer. In this study, we investigated both the melanogenesis and anti-melanoma effects of triterpenoid saponins of *Gynostemma pentaphyllum* (GpS), a medicinal herbal plant. In the investigation of the potential melanogenic activity of GpS, we found that non-toxic dosages of GpS markedly increased melanin formation. Western blot analysis showed that GpS treatment significantly up-regulated the expression levels of the key melanogenic proteins, including tyrosinase (TYR), microphthalmia-associated transcription factor (MITF), TRP-1 and TRP2 in a dose-dependent manner. The p-CREB, which is the down-stream target of PKA is also elevated upon GpS treatment. We further observed that H89, a PKA inhibitor, attenuated the GpS induced tyrosinase activity, melanin content, the expression of p-CREB. In addition to the cAMP/PKA signaling pathway, GpS treatment also up-regulates the nuclear β -catenin of the Wnt signaling pathway which is involved in the transcriptional activation of MITF in melanogenesis. To identify the active saponins, GpS was fractionated in the MCI-CHP 20P column and eluted with methanol in a gradient of 50 to 100%. The resulting ten fractions were tested for their melanogenesis activities.

We found that Fractions 5 to 9 showed the strongest effect in melanin synthesis in B16 cultures. Western blot analysis revealed that Fractions 5 to 9 significantly up-regulate the expression of TYR and MITF, while Fractions 7 to 9 are more effectively increased nucleus β -catenin expression.

Our early works showed that GpS exhibits strong anti-cancer effects in both cellular and animal models. We were wonder whether GpS would exert anti-cancer effect against melanoma. To address this question, we tested and showed that GpS inhibited B16 cells migration in a dose-dependent manner. Tumorigenesis assay demonstrated the GpS significantly suppresses the growth of B16-induced tumor in congenic mice. Our study seems to be in line with the recent reports that stimulation of melanogenesis might be associated with the anti-melanoma effect by decreasing proliferation and invasiveness of melanoma (Chien, *et al.*,2009). Based on the above results, we proposed that GpS might exert the anti-melanoma effect by stimulating the melanogenesis through the activation of cAMP/PKA and Wnt/ β -catenin signaling pathways.

In addition to the work on GpS, we also investigated the potential anti-melanogenic effect of Qian-Wang-Hong-Bai-San (QW), which had been used traditionally in China as a skin whitening formula. QW inhibited melanin synthesis and decreased tyrosinase activity in B16 cells at no or mild cytotoxic dosages. Western blot analysis showed that

QW treatment down-regulated the levels of p-p38, p-CREB, MITF, TYR, TRP-1 and TRP-2 in a dose-dependent manner. At the same time, QW treatment for 48 h blocked the IBMX-induced elevation of cellular melanin content and tyrosinase activity. To conclude, the anti-melanogenic activity of QW in B16 melanoma cells can be attributed, at least in part, to the inhibition of the p38 MAPK and PKA signaling pathways. Our data provides, for the first time, the underlying mechanism of the skin whitening property of this ancient formula.

List of contents	vi
List of figures	xiii
List of tables	xvi
Abbreviations	xvii

Chapter 1: Introduction	1
1.1 Melanogenesis.....	2
1.1.1 The structure and function of skin.....	3
1.1.2 Melanin pigments	5
1.1.3 Chemistry of melanin synthesis.....	6
1.1.4 Melanin transportation.....	12
1.1.4.1 Exocytosis.....	14
1.1.4.2 Cytophagocytosis.....	17
1.1.4.3 Fusion of plasma membranes.....	18
1.1.4.4 Transfer via membrane vesicles.....	19
1.2 MITF and the primary signaling pathway of melanin synthesis.....	19
1.3 Signaling pathways involved in the regulation of melanogenesis.....	26
1.3.1 At transcriptional level.....	26
1.3.1.1 Mitogen-activated protein kinases.....	29
1.3.1.2 Wnt/ β -catenin signaling pathway.....	31
1.3.2 At post-translational level.....	34
1.4 Skin cancer.....	35
1.4.1 Types of skin cancer.....	35
1.4.1.1 Basal Cell Carcinoma.....	36

1.4.1.2 Actinic Keratosis.....	37
1.4.1.3 Squamous cell carcinoma <i>in situ</i>	38
1.4.1.4 Squamous cell carcinoma.....	38
1.4.1.5 Melanoma.....	39
1.4.1.5.1 First stage - Acquired melanocytic nevus.....	40
1.4.1.5.2 Second stage - Dysplastic nevus.....	41
1.4.1.5.3 Third stage - Radial Growth Phase.....	42
1.4.1.5.4 Fourth stage - Vertical Growth Phase.....	43
1.4.1.5.5 Fifth stage – Metastasis.....	43
1.5 Classification of cutaneous malignant melanoma.....	43
1.6 Etiology and risk factors of melanoma.....	46
1.6.1 Molecular mechanisms.....	47
1.6.2 Growth factor dependence in melanoma development.....	48
1.6.3 Role of receptor tyrosine kinases in melanoma progression.....	50
1.6.4 Mitogen activating protein kinase pathway (MAPK).....	54
1.6.5 AKT Pathway.....	55
1.7 Current therapies for melanoma.....	57
1.7.1 Chemotherapy.....	57
1.7.2 Immuno-therapy.....	62

1.7.2.1 Interleukin-2 therapy.....	63
1.7.2.2 Interferon- α therapy.....	65
1.7.2.3 CTLA-4 therapy.....	66
1.7.3 Chemotherapy combined with immunotherapy.....	68
1.8 Targeted therapies for melanoma treatment.....	70
1.8.1 Targeting the RAS/RAF/MAPK Pathway in Melanoma.....	71
1.8.2 Targeting the PI3/AKT Pathway in Melanoma.....	74
1.8.3 Targeting Wnt/ β -catenin Pathway in melanoma.....	77
1.9 Novel tyrosine kinase targets in melanoma.....	81
1.9.1 c-Kit receptor.....	81
1.9.2 SRC Kinase.....	82
1.10 <i>Gynostemma pentaphyllum</i> , a traditional Chinese medicinal herb.....	84
1.10.1 <i>Gynostemma pentaphyllum</i> used as a folk medicine.....	84
1.10.2 Gp total saponins (GpS).....	85
1.10.2.1 Chemical constituents of Gp.....	85
1.10.2.2 Chemical properties of saponins.....	86
1.10.2.3 Pharmacological Activities of Gp saponins.....	90
1.11 Rationales and Objectives, research plans.....	91

Chapter 2: Materials & Methods	95
2.1 Reagents.....	96
2.2 Preparation of drugs.....	96
2.2.1 Preparation of Qian-Wang-Hong-Bai-San	96
2.2.2 Preparation of GpS.....	97
2.2.3 Preparation of GpS fractions.....	97
2.3 Cell lines and culture medium.....	98
2.4 Cell viability assay.....	98
2.4.1 MTT assay.....	98
2.4.2 XTT assay.....	99
2.5 Tyrosinase activity assay.....	99
2.6 Measurement of cellular melanin contents.....	100
2.7 Protein analysis.....	100
2.7.1 Preparation of total protein lysates.....	100
2.7.2 Preparation of cytoplasmic and nuclear lysates.....	101
2.7.3 Determination of protein concentration.....	102
2.7.4 Western blotting.....	102
2.7.5 Immunoblotting.....	103
2.8 Wound healing assay.....	103

2.9 Colony formation assay.....	104
2.9.1 Anchorage dependent colony formation assay.....	104
2.9.2 Semi-soft agar assay.....	104
2.10 Tumor growth <i>in vivo</i>	104
2.11 Statistical analysis.....	105
Chapter 3: The effect of Qian-Wang-Hong-Bai-San on melanogenesis in B16 melanoma cells.....	106
3.1 Introduction.....	107
3.1.1 Qian-Wang-Hong-Bai-San.....	108
3.2 Results.....	110
3.2.1 QW inhibited tyrosinase activity and melanin synthesis in B16 cells at non-cytotoxic dosages.....	110
3.3.2 QW down-regulated the levels of protein expression of MITF, tyrosinase, TRP-1 and TRP-2 in B16 cells.....	112
3.3.3 QW inhibited the phosphorylation of p38 in B16 cells.....	112
3.3.4 QW inhibited IBMX-induced elevation of tyrosinase activity and melanin content in B16 cells.....	115
3.3.5 QW inhibited IBMX-induced up-regulation of p-CREB and p-PKA expressions in	

B16 cells.....117

3.4 Discussion.....119

Chapter 4: The effects of *Gymnostemma pentaphyllum* on melanogenesis in B16

melanoma cells.....122

4.1 Introduction.....123

4.2 Results.....125

4.2.1 GpS stimulated tyrosinase activity and melanin synthesis in B16 and B16F10 cells
at non-cytotoxic dosages.....125

4.2.2 GpS up-regulated the levels of protein expression of the melanogenic molecules in
B16 and B16F10 cells.....129

4.2.3 GpS induced the β -catenin and the phosphorylation of CREB in B16 and B16F10
cells.....129

4.2.4 H89 attenuated GpS-induced elevation of tyrosinase activity and melanin content in
B16 and B16F10 cells.....132

4.2.5 H89 attenuated GpS-induced up-regulation of p-CREB expression in B16 and
B16F10 cells.....136

4.3 Identification of the active fractions of GpS in melanin production.....138

4.3.1 GpS fractions stimulated melanin synthesis and tyrosinase activity in B16 cells at

non-cytotoxic dosages.....	138
4.3.2 GpS fractions up-regulated the levels of protein expression of MITF, tyrosinase, TRP-1, TRP-2 in B16 cells.....	142
4.3.3 GpS fractions induced the β -catenin and the phosphorylation of CREB in B16 cells.....	142
4.4 Discussion.....	144
Chapter 5: The anti-melanoma effects of <i>Gymnostemma Pentaphyllum</i>.....	148
5.1 Introduction.....	149
5.2 Results	150
5.2.1 GpS inhibits cell proliferation in melanoma cells.....	150
5.2.2 GpS activated the Wnt/ β -catenin signaling pathway in B16, B16F10, SW1, A375 and SK-Mel-1 melanoma cells.....	152
5.2.3 GpS treatment with H89 inhibited B16 colony formation.....	156
5.2.4 GpS inhibited the anchorage-independent growth of A375 and SW1 melanoma cells in semi-soft agar.....	157
5.2.5 GpS inhibited B16 melanoma cell growth in C57BL/6 mice.....	160
5.2.6 GpS inhibits the migration of B16 and B16F10 cells in a dose-dependent manner.....	163

5.3 Discussion.....	165
Chapter 6: Conclusions.....	170
6.1 Grand summary.....	171
6.1.1 Summary of Qian-Wang-Hong-Bai-San.....	171
6.1.2 Summary and future study of the total saponins of <i>Gymnostemma</i> Pentaphyllum.....	171
6.2 List of publication.....	175
6.3 Curriculum vitae.....	176
6.4 Reference.....	177
