Abstract

The molecular design, synthesis, spectroscopic and photophysical characterization of a series of new transition metal Pt, Ir, Cu, Au and Hg-containing complexes containing diimine, carbazole and fluorene units as luminescent chromophores are discussed. The applications of some of these complexes in optoelectronic devices have also been investigated.

Chapter 1 gives a brief overview of the background of organometallic complexes and their role in the fields of organic light emitting diodes (OLEDs). The chemistry and utility of carbazole and bipyridine luminophores in material research are also discussed.

The synthesis and photophysical studies of several multifunctional phosphorescent cyclometalated Pt(C[^]N)(O[^]O) complexes consisting of the hole-transporting carbazole luminophores were reported in Chapter 2. Electronic properties of these complexes were influenced by changing the organic groups in the complexes. These triplet emitters are strongly phosphorescent at room temperature with relatively short lifetimes in solution. OLEDs using these complexes have been fabricated with very promising performance. The potential of exploiting some of our green phosphores in the realization of white OLEDs (WOLEDs) is also discussed.

In Chapter 3, the synthetic methodology and characterization of a series of new

platinum(II) α -diimine bis(arylacetylide) complexes with different substituents on the diimine ligands were reported. The photo- and electroluminescence properties of these phosphorescent metalated complexes were studied in terms of the nature of arylacetylide ligands. The impacts of different substituents on the diimine and ancillary arylacetylide ligands upon their emissive behavior were examined to reveal their emission energies can be systematically modified. Intensive room temperature phosphorescence of these complexes which are beneficial to device application are also highlighted here. A series of highly efficient and bright OLEDs have been achieved based on these triplet emitters.

Chapter 4 presents the synthetic methodology and characterization of a series of highly efficient iridium phosphor, with good color tenability, based on the carbazole and fluorene luminophores bearing the dpm or dpa ancillary ligands. The electronic properties of these complexes were greatly influenced by changing the organic cyclometalated ligands in the complexes. These iridium-based triplet emitters give strong phosphorescence light at room temperature with relatively short lifetimes in solution, and OLEDs using some of these complexes were fabricated and showed moderate to very high efficiency. The highly efficient WOLEDs with two-element structure of exploiting some of these new iridium triplet emitters are also discussed.

In Chapter 5, a series of diimine-based heteroleptic Cu(I) complexes were designed and synthesized. Taking advantage of the abundant photophysical properties of diimine

ligands, copper(I) ion can be incorporated into the diimine structure to give attractive photoluminescent properties of the complexes, which render them a great potential to excel in optoelectronic devices.

Chapter 6 outlines the synthesis, structural, photophysical, electrochemical and electroluminescent properties of a novel family of cyclometalated gold(III) and mercury(II) complexes. Different kinds of carbazole-containing cyclometalating ligands were introduced to fine-tune their absorption and emissive characteristics of the compounds. The observation of intense room temperature phosphorescence emissions of these complexes which are promising for device applications is also discussed.

Chapters 7 and 8 present the concluding remarks and the experimental details of all the works described in Chapters 2–6.

Table of Contents

Declaration	i
Abstract.....	ii
Acknowledgements	v
Table of Contents	vii
List of Tables	xv
List of Figures.....	xvii
List of Schemes.....	xxvi
List of Abbreviations and Symbols	xxviii
Formula Index.....	xxxii
Chapter 1 Introduction	1
1.1 Introduction of Organometallic Functional Materials	1
1.2 Electronic States and Transitions for Transition Metal Complexes	3
1.3 The Importance of Heavy Metals in Light-Emitting Devices	5
1.4 Background of Organic Light-Emitting Diodes (OLEDs)	7
1.5 Operation Principle of OLED	8
1.6 Applications in White OLEDs	11
1.7 Luminescent Chromophores Used in OLEDs	16
1.7.1 Carbazole	16
1.7.2 Fluorene	18

1.7.3 Diimine	20
1.8 Objectives of Thesis	21
1.9 References	23
Chapter 2 Synthesis, Characterization, Photophysical and Electroluminescent Properties of Cyclometalated Platinum(II) Complexes Containing Carbazole Unit	28
2.1 Introduction	28
2.2 Synthesis.....	32
2.2.1 Synthesis of Cyclometalated Ligands	32
2.2.2 Synthesis of Cyclometalated Platinum(II) Complexes.....	33
2.3 Spectroscopic Characterization	35
2.4 Optical Absorption and Photoluminescence Spectroscopy	39
2.5 Electrochemical Characterization.....	47
2.6 Thermal Properties	49
2.7 Electroluminescent Devices	51
2.7.1 Green Electrophosphors Based on Platinum Complexes with Hole-transporting 2-[3-(<i>N</i> -butylcarbazolyl)pyridine].....	52
2.7.2 Yellow-green Devices using Trifluoromethyl-Substituted Pyridyl Platinum(II) Complex.....	60
2.7.3 Green Electrophosphors Based on Platinum Complexes with	

2,2,6,6-Tetramethyl-3,5-heptanedionate Ancillary Ligand	64
2.8 Concluding Remarks	70
2.9 References	71
Chapter 3 Synthesis, Structures, Photophysical and Electroluminescent Properties of New Bis(arylacetylide) Platinum(II) Diimine-Stabilized Complexes	76
3.1 Introduction	76
3.2 Synthesis.....	79
3.2.1 Synthesis of Diimine Ligands L₅-L₁₀	79
3.2.2 Synthesis of Platinum(II) Dichloride Precursors and Some Ethynyl Ligands	83
3.2.3 Synthesis of Diimine Platinum(II) Complexes.....	84
3.3 Spectroscopic Characterization	85
3.4 X-ray Crystallography	90
3.5 Optical Absorption and Photoluminescence Spectroscopy	96
3.6 Electrochemical Characterization.....	102
3.7 Density Functional Theory (DFT) Calculations	104
3.8 Thermal Properties	107
3.9 Electroluminescent Devices	109
3.9.1 Orange Electrophosphors Based on Platinum Complexes Bearing <i>N</i> -aryl	

Substituted Bipyridine Ligands	109
3.9.2 Two-emitter WOLED Characterization.....	116
3.10 Concluding Remarks	120
3.11 References.....	121
Chapter 4 Synthesis, Structures and Photophysical and Electroluminescent Properties of New Cyclometalated Iridium(III) Complexes.....	126
4.1 Introduction	126
4.2 Synthesis.....	131
4.2.1 Synthesis of Cyclometalated Ligands L₁₅-L₂₀	131
4.2.2 Synthesis of Heteroleptic Iridium(III) Complexes	132
4.3 Spectroscopic Characterization	134
4.4 Optical Absorption and Photoluminescence Spectroscopy	139
4.5 Electrochemical Properties	147
4.6 Thermal Properties	150
4.7 Electroluminescent Devices	152
4.7.1 Electrophosphors Based on Iridium Complexes of 9- Substituted-(2-pyridyl)carbazole Derivatives Bearing Dpm Ligands	152
4.7.2 Green Electrophosphors Based on Iridium Complexes with 9-Substituted-(2-pyridyl)carbazole Derivatives Bearing Ancillary	

2,2-Dipyridyl Amino Ligand	163
4.7.3 Electrophosphors Based on Iridium Complexes with Ancillary	
2,2-Dipyridyl Amino Ligand	169
4.7.4 Electrophosphors Based on Iridium Complexes of 9-	
Butyl-(2-pyridyl)fluorene Derivatives Bearing dpa Ligands	175
4.8 Concluding Remarks	184
4.9 References	185
Chapter 5 Synthesis, Structures and Emissive Properties of	
Heteroleptic Copper(I) Complexes	190
5.1 Introduction	190
5.2 Synthesis	193
5.2.1 Synthesis of Diimine Ligands L₂₁	193
5.2.2 Synthesis of Heteroleptic Copper(I) Complexes	194
5.3 Spectroscopic Characterization	195
5.4 Optical Absorption and Photoluminescence Spectroscopy	200
5.5 Electrochemical Characterization	205
5.6 Thermal Properties	207
5.7 Concluding Remarks	208
5.8 References	208

Chapter 6 Synthesis, Structures and Photophysical Properties of Gold(III) and Mercury(II) Arylacetylide Complexes212

6.1 Introduction 212

6.2 Synthesis..... 215

 6.2.1 Synthesis of Cyclometalated Ligands **L₂₂** and **L₂₃** 215

 6.2.2 Synthesis of Cyclometalated Gold(III) Complexes..... 216

6.3 Spectroscopic Characterization 218

6.4 Optical Absorption and Photoluminescence Spectroscopy 226

 6.4.1 Photophysical Properties of Cyclometalated Gold(III) Complexes . 226

 6.4.2 Photophysical Properties of Mercury(II) Complexes..... 231

6.5 Electrochemical Characterization..... 236

6.6 Thermal Properties 237

6.7 Concluding Remarks 239

6.8 References 240

Chapter 7 Concluding Remarks and Future Work244

Chapter 8 Experimental Details247

8.1 General Information 247

8.2 Materials 249

8.3 Experimental Details for Chapter 2 250

 8.3.1 Synthesis of Precursors..... 250

8.3.2 Synthesis of Cyclometalating Ligands	252
8.3.3 General Procedures of Synthesis of Cyclometalated Platinum(II) Complexes	255
8.4 Experimental Details for Chapter 3	259
8.4.1 Synthesis of Bipyridyl Ligands L₅ and L₆	259
8.4.2 Synthesis of Platinum (II) Dichloride Precursors.....	269
8.4.3 General Procedure of Synthesis of Platinum(II) Complexes	270
8.5 Experimental Details for Chapter 4	274
8.5.1 Synthesis of Cyclometalating Ligands L₁₅ to L₂₀	274
8.5.2 General Procedures of Synthesis of Heteroleptic Iridium(III) Complexes	278
8.6 Experimental Details for Chapter 5	283
8.6.1 Synthesis of Diimine Ligands L₂₁	283
8.6.2 Synthesis of Homoleptic Copper(I) Complexes.....	284
8.6.3 Synthesis of Heteroleptic Copper(I) Complexes	285
8.7 Experimental Details for Chapter 6	289
8.7.1 Synthesis of Cyclometalating Ligands L₂₂ and L₂₃	289
8.7.2 General Procedures of Synthesis of Mercury(II) Chloride Complexes..	290

8.7.3 General Procedures of Synthesis of Alkynylmercury(II) Complexes	
.....	292
8.7.4 General Procedures of Synthesis of Cyclometalated Alkynylgold(III)	
Complexes	294
8.8 References	298
