Abstract

Hypoxia and ocean acidification (OA) are amongst the major environmental threats to marine ecosystems worldwide. Biofilms, the signpost to guide larval settlement of many benthic invertebrates, are known to be responsive to environmental changes and thus can become the crucial factor for the response of benthic invertebrate communities. This study aimed at investigating the individual and interactive effects of hypoxia and OA on biofilms and the subsequent effects on larval settlement. Biofilms collected from two sites (clean, hypoxic) were treated with a factorial design of low dissolved oxygen and/or low pH conditions in microcosms and the bacterial cell density and viability (by LIVE/DEAD® cell viability assays) were analyzed. Larval settlement preference was tested with the marine invertebrate, *Crepidula onyx*.

The total bacterial cell densities of biofilms of the hypoxia and hypoxia and OA combination treatment were lower than that of the control biofilms for both sites. There was generally no significant difference in cell viability among control and different treatments for both sites. While the larval settlement rate on hypoxia and hypoxia and OA combination treated biofilms was significantly lower. In conclusion, this study revealed that hypoxia and OA are likely to affect larval settlement by alteration of biofilms, and this may lead to alterations in future coastal communities.

Table of Contents

Declaration.....	i
Abstract.....	ii
Acknowledgements.....	iii
Table of Contents.....	iv
List of Table.....	vi
List of Figures.....	vii
Abbreviations.....	viii
Chapter 1: Introduction.....	1
1.1 Research background.....	1
1.2 Marine hypoxia.....	2
1.3 Ocean Acidification.....	5
1.4 Interaction of hypoxia and OA.....	7
1.5 Biofilms.....	8
1.6 Individual and interactive effect of hypoxia and OA on biofilms....	10
1.7 Effects of hypoxia or OA manipulated biofilms on settlement of marine invertebrates.....	11
1.8 The studied organism, <i>Crepidula onyx</i>	12
1.9 Research objectives.....	14
Chapter 2: Methods.....	16

2.1	Biofilms development.....	16
2.2	Exposure of biofilms to lower DO and pH levels in microcosms....	19
2.3	LIVE/DEAD cell viability assays for bacterial density and viability	22
2.4	Studied organism.....	23
2.5	Larval settlement assay.....	24
2.6	Statistical analysis	27
	Chapter 3: Results and discussion	28
3.1	Physical parameters of clean and hypoxic sites	28
3.2	Bacterial cell density and viability	29
3.3	Larval settlement assay.....	37
3.4	Correlation between bacterial density and percentage settlement ...	44
	Chapter 4: Discussion, conclusion and implications.....	46
4.1	Discussion.....	46
4.2	Conclusion	53
4.3	Implications	54
	List of References	55
	Curriculum Vitae	69
