Doctor of Philosophy

Principal Supervisor: Dr. Li Min

Hong Kong Baptist University

August 2011

ABSTRACT

Parkinson's disease (PD) is the second most common neurodegenerative disease affecting 2% of the population over 65 years old. The biochemical and molecular mechanisms leading to dopaminergic neuronal degeneration in PD remain unclear. However, a large body of evidence suggests that oxidative stress and abnormal protein aggregation are two critical factors contributing to the pathogenesis of PD.

6-Hydroxydopamine (6-OHDA), an analog of the neurotransmitter dopamine, is widely used to induce PD-like damages in animals as well as in cells, and has been used to test neuroprotective effects of multiple anti-PD drugs. In this study, 6-OHDA was used to induce SH-SY5Y cells toxicity as a cellular PD model for the screening of anti-PD compounds derived from Chinese herbal medicines. Our study revealed that baicalein, a flavonoid extracted from Chinese herbal medicine Huangqin (*Scutellaria baicalensis* Georgi), inhibited 6-OHDA-induced cell death in human neuroblastoma SH-SY5Y cells, probably via stabilizing the intracellular calcium homeostasis.

Abnormal protein aggregation and accumulation in the brain have been linked to the pathogenesis of neurodegenerative diseases including PD. Recent studies suggested that the oligomeric form of aggregates may represent the most toxic species, and thus could be a good therapeutic target. Our study revealed that baicalein inhibited both oligomerization and fibrillation of alpha-synuclein (α -syn) *in vitro* and prevented the formation of α -syn oligomers in neuronal cells. Baicalein also protected SH-SY5Y cells from α -syn oligomer-induced toxicity. Our study indicates that baicalein is a good inhibitor of α -syn aggregation and toxicity.

One of the strategies for the treatment of neurodegenerative diseases is to promote the clearance of abnormal protein aggregates in the neurons. Autophagy-lysosome system is a major mechanism for the degradation of large protein aggregates in the cells, thus

seeking potent autophagy enhancers to promote the degradation of pathogenic protein aggregates could be a strategy to identify therapeutic agents for neurodegenerative diseases. Our study identified a potent autophagy inducer-isorhynchophylline (IsoRhy), an alkaloid isolated from herbal medicine Gouteng (*Uncaria rhynchophylla* (Miq.) Jacks). IsoRhy induced massive autophagy in neuronal cells (N2a, SH-SY5Y, PC12 and primary neuron) as well as in the brain of *Drosophila*; IsoRhy promoted degradation of wild type & mutant alpha-synuclein monomers, alpha-synuclein oligomers and alpha-synuclein/synphilin-1 aggresomes in neuronal cells via autophagy-lysosome pathway; IsoRhy Induced autophagy in N2a cells in a mTOR-independent but beclin-1-dependent manner.

Given the role of oxidative stress and abnormal protein aggregation in neurodegenerative diseases including PD, our results suggest that baicalein and IsoRhy, the bioactive compounds isolated from Chinese herbal medicine, may have potential to be developed into therapeutic agents for the treatment of these devastating disorders.

Keywords: Abnormal protein aggregation, Alpha-synuclein, Autophagy, Baicalein, Isorhynchophylline, Parkinson's disease, 6-hydroxydopamine,

TABLE OF CONTENTS

DECLARATION	i
ABSTRACT	ii
ACKNOWLEDGEMENTS	iv
TABLE OF CONTENTS	v
LIST OF FIGURES	ix
LIST OF ABBREVIATION	xii
CHAPTER 1 Introduction.....	1
1.1 Parkinson's disease.....	1
1.2 Epidemiology of PD.....	2
1.3 Pathology of PD	3
1.4 Etiology of PD.....	4
1.5 Therapeutic potential of Traditional Chinese Medicine in the treatment of PD	17
CHAPTER 2 Hypothesis and Objectives.....	19
CHAPTER 3 Baicalein prevents 6-OHDA/SCORBIC Acid -Induced SH-SY5Y Cell Death via Stabilizing Intracellular Calcium Homeostasis.....	24
3.1 Introduction	24
3.2 Materials and Methods	28
3.2.1 Reagents	28
3.2.2 Cell culture and drug treatments	29
3.2.3 6-OHDA degradation assay.....	29
3.2.4 Cell viability and cytotoxicity assay	30
3.2.5 DAPI staining	30
3.2.6 Calcium imaging	31
3.2.7 Measurement of intracellular ROS level.....	31
3.2.8 Flow cytometry	32
3.2.9 Statistical analysis	32
3.3 Results	33

3.3.1	6-OHDA toxicity on SH-SY5Y cells is greatly enhanced in the presence of ascorbic acid	33
3.3.2	Baicalein prevents 6-OHDA/AA-induced toxicity on SH-SY5Y cells	39
3.3.3	Baicalein prevents 6-OHDA/AA-induced intracellular calcium elevation in SH-SY5Y cells	46
3.3.4	6-OHDA/AA toxicity is independent of dopamine transporter (DAT) in SH-SY5Y cells.....	50
3.4	Conclusion and discussion.....	53
CHAPTER 4 Baicalein Inhibits Formation of Alpha-synuclein Oligomers Within Living Cells and Prevents Beta-amyloid Peptide Fibrillation and Oligomerization		
4.1	Introduction.....	59
4.2	Materials and Methods.....	62
4.2.1	Reagents.....	62
4.2.2	Sample preparation for the aggregation assays.....	63
4.2.3	Thioflavin-T (Th-T) fluorescence assay	63
4.2.4	Oligomeric ELISA	64
4.2.5	Cell culture and transient transfections.....	65
4.2.6	GN-aSyn/aSynGC fluorescence complementation assay	65
4.2.7	Cell imaging.....	66
4.2.8	Flow cytometry analysis	66
4.2.9	Native and denatured PAGE and immunoblotting.....	67
4.2.10	Inhibition and disaggregation of A β fibrils by baicalein	68
4.2.11	Electron microscopy	69
4.2.12	Preparation of A β oligomers and anti-oligomerization effect of baicalein	69
4.2.13	LDH assay.....	70
4.2.14	MTT assay	71
4.2.15	Data analysis	71

4.3	Results	72
4.3.1	Systematical comparison of anti-oligomeric and anti-fibrillar activities of 8 compounds extracted from Chinese herbal medicine on α -syn aggregation	72
4.3.2	Baicalein inhibits α -syn oligomerization in living cells.....	77
4.3.3	Baicalein inhibits A β 1-42 fibril formation and disaggregates pre-formed A β 1-42 fibrils	81
4.3.4	Baicalein inhibits A β 1-42 oligomers formation.....	84
4.3.5	Baicalein alleviates the neurotoxicity of α -syn oligomers and A β 1-42 fibrils	86
4.4	Conclusion and discussion	89
CHAPTER 5 Isorhynchophylline, An Alkaloid Extracted From Chinese Herbal Medicine Gouteng, Promotes the Degradation of Alpha-synuclein in Neuronal Cells via Inducing Autophagy		
5.1	Introduction	95
5.2	Materials and Methods	99
5.2.1	Reagents	99
5.2.2	Establishment of N2a cells constantly expressing GFP-LC3.....	100
5.2.3	Western blotting analysis.....	100
5.2.4	Cell imaging of fluorescent puncta	101
5.2.5	Flow cytometry analysis.....	102
5.2.6	Primary neuron culture.....	102
5.2.7	Transfection of primary neurons	104
5.2.8	Differentiation of human embryonic stem cells into dopaminergic neurons	104
5.2.9	Immunostaining.....	106
5.2.10	RNA interference assay	106
5.2.11	Statistical analysis	107
5.3	Results	108
5.3.1	IsoRhy induces autophagy in neuronal cell lines	108

5.3.2	IsoRhy induces autophagy in primary mice cortical neurons.....	117
5.3.3	IsoRhy promotes clearance of transient over-expression of α -syn in N2a cells via inducing autophagy.....	121
5.3.4	IsoRhy promotes the degradation of α -syn in human dopaminergic neurons differentiated from embryonic stem cells.....	128
5.3.5	IsoRhy induces autophagy in neuronal cells in an mTOR-independent and Beclin-1 -dependent manner.	130
5.4	Conclusion and discussion.....	133
CHAPTER 6 sorhynchophylline induces autophagy in <i>Drosophila</i>		137
6.1	Introduction.....	137
6.2	Materials and Methods.....	138
6.2.1	Reagents.....	138
6.2.2	<i>Drosophila</i> strains and culture	139
6.2.3	Drug feeding	139
6.2.4	Confocal imaging of GFP-atg8a puncta in the brain	139
6.2.5	LysoTracker staining.....	140
6.2.6	Western blotting analysis	140
6.3	Results.....	141
6.3.1	IsoRhy induces autophagy in L3 larvae fat body	141
6.3.2	IsoRhy induces autophagy in L3 larvae.....	143
6.3.3	IsoRhy induces autophagy in adult <i>Drosophila</i> brain.....	145
6.4	Conclusion and discussion.....	147
CHAPTER 7 General Discussion and Conclusion.....		150
