Parental emotional attachment and fear of intimacy of emerging adults in Hong Kong: the effect of differentiation of self
Chiu, Renee

Date of Award: 2019
Abstract

Emerging adulthood has been described as a distinctive stage of life between adolescence and young adulthood, in which the hallmark of development is signified by the achievement of intimacy in romantic relationships. From a family systems perspective, the degree to which parents have resolved their own emotional attachment contributes to the capacity of emerging adults to develop intimacy in romantic relationships without inhibition from fear of closeness.

This study empirically examines the relationship between parental emotional attachment and the fear of intimacy of emerging adults by exploring the mediating role of differentiation of self. One of the most important and original contributions of this study is the development and validation of the Parental Emotional Attachment Scale (PEAS) which measures the intensity of parental emotional attachment.

This study applies a mixed-methods sequential exploratory design with four samples of emerging adults in Hong Kong. First, interviews \( (N=24; M_{age}=23.6; 54\% \text{ female}) \) are conducted to explore the variations in subjective experiences with family of origin and fear of romantic intimacy. Building on the qualitative data from the interviews, the PEAS is developed through two pilot studies with two separate samples (combined \( N=551; M_{age}=20.6; 61\% \text{ female} \)). The PEAS is validated and then applied in the main study \( (N=755; M_{age}=21.8; 55.4\% \text{ female}) \).

An exploratory factor analysis yields four factors with 34 items, including Parental Emotional Fusion, Parental Emotional Separateness, Parental Emotional Over-functioning and Parental Emotional Projection, which explain for 46.81% of the total variance. The
four-factor structure is confirmed by using a confirmatory factor analysis. The results indicate substantial correlations between the PEAS and the Chinese version of the State-Trait Anxiety Inventory, which supports the convergent validity of the PEAS. The results also show that the PEAS has sufficient reliability (Cronbach’s alpha= .89) and validity to support its application in the Hong Kong Chinese population.

Concurrently, it is found that parental emotional attachment is negatively correlated with the level of differentiation of self, and positively correlated with the fear of intimacy. In addition, differentiation of self significantly mediates the relation between parental emotional attachment and fear of intimacy. Finally, a hierarchical regression analysis reveals that parental emotional over-functioning, emotional cutoff and emotional fusion with family are predictive of the fear of intimacy.

The overall findings highlight differentiation of self as an underlying mechanism through which parental emotional attachment affects the level of fear of intimacy of emerging adults. Besides, emerging adults who experience greater parental emotional over-functioning, emotional cutoff and emotional fusion with family show higher levels of fear of intimacy. These findings jointly imply the importance for emerging adults to differentiate from their family of origin by balancing closeness and separateness, bridging emotional distance, reducing emotional cutoff and recognizing their own adaptive patterns in relationships, which serve as a practical framework for the future development of relationship education and counseling of emerging adults in Hong Kong.

Table of contents vi  
List of tables x  
List of figures xi  
List of acronyms and abbreviations xii  

## Chapter 1. Introduction 1  
1.1 Theoretical Lens: Bowen Family Systems Theory 2  
1.2 Parental Over-involvement and Its Impact 3  
1.3 Research Gaps 4  
1.4 Purpose of Study 6  
1.5 Research Questions 9  
1.6 Significance of Study 10  
1.7 Outline of Thesis 11  

## Chapter 2. Romantic Relationships in Emerging Adulthood 13  
2.1 Emerging Adulthood in Cultural Context of Hong Kong 14  
2.2 Romantic Relationships during Emerging Adulthood 19  
2.3 Family Influence and Capacity for Romantic Intimacy 28  
2.4 Summary 34  

## Chapter 3. Differentiation of Self during Emerging Adulthood: The Impact of Intense Parental Emotional Attachment 36  
3.1 Bowen Theory and Emerging Adulthood 37  
3.2 Pseudo Maturity: The Role of Emotional Fusion and Emotional Cutoff. 49  
3.3 Parental Over-involvement during Emerging Adulthood 55
Chapter 4. Parental Emotional Attachment and Fear of Intimacy: The Mediating Role of Differentiation of Self

4.1 Conceptual Framework
4.2 Hypothesized Factors for Parental Emotional Attachment Scale
4.3 Parental Emotional Attachment and Chronic Anxiety
4.4 Demographic Factors and Parental Emotional Attachment
4.5 Parental Emotional Attachment and Differentiation of Self.
4.6 Parental Emotional Attachment and Fear of Intimacy
4.7 Differentiation of Self and Fear of Intimacy
4.8 Mediating Role of Differentiation of Self
4.9 Predictive Variables and Fear of Intimacy
4.10 Summary

Chapter 5. Research Methodology

5.1 Mixed Methods Research Design
5.2 Substantive Validity Phase: Development of Pool of Items for PEAS
5.3 Structural Validity Phase: Development of PEAS through Two Pilot Studies
5.4 External Validity Phase: Validation of PEAS
5.5 Summary

Chapter 6. Development and Validation of Parental Emotional Attachment Scale

6.1 Development of Parental Emotional Attachment Scale
6.2 Conceptualization and Operationalization of Parental Emotional Attachment
6.3 Substantive Validity Phase: Preliminary Study
6.4 Structural Validity Phase
6.5 Summary

Chapter 7. Results of Main Study

7.1 External Validity Phase: Validation of PEAS
7.2 Socio-demographic Factors and PEAS
7.3 Mean and Standard Deviation of Scores of Parental Emotional Attachment, Level of Differentiation of Self and Level of Fear of Intimacy
7.4 Correlations among Parental Emotional Attachment, Differentiation of Self and Fear of Intimacy
7.5 Correlations among PEAS Subscales and Differentiation of Self Inventory and Fear of Intimacy Scale
7.6 Correlations between PEAS Subscales and C-DSI Subscales
7.7 Correlations between PEAS subscales and C-FIS subscales
7.8 Mediating Effect of Differentiation of Self in Relationship between Parental Emotional Attachment and Fear of Intimacy
7.9 Predictive Effects of Socio-demographic Variables, Parental Emotional Attachment, and Differentiation of Self on Fear of Intimacy
7.10 Summary

Chapter 8. Discussions and Limitations

8.1 Parental Emotional Attachment Scale
8.2 Parental Emotional Attachment and Differentiation of Self
8.3 Parental Emotional Attachment and Fear of Intimacy
8.4 Mediating and Predictive Roles of Differentiation of Self
8.5 Limitations and Future Directions
8.6 Summary

Chapter 9. Conclusion and Implications

9.1 Theoretical Implications
9.2 Implications for Social Work and Clinical Practices
9.3 Conclusion

APPENDIX A Guiding Questions for Semi-structured Interview
APPENDIX B Debriefing Letter – English version  249
