Abstract

Roles and mechanisms of abscisic acid (ABA) in inducing the antioxidant defense were studied in leaves of maize (*Zea mays* L.) seedlings under water stress and non-stressed conditions.

Treatments with 10 and 100 μM ABA significantly increased the generation of O_2^- and H_2O_2 , followed by an increase in activities of antioxidant enzymes such as superoxide dismutase (SOD), catalase (CAT), ascorbate peroxidase (APX) and glutathione reductase (GR), and the contents of several antioxidant metabolites such as ascorbate (AsA), reduced glutathione (GSH), α -tocopherol (α -TOC) and carotenoid (CAR) in a dose- and time-dependent pattern in leaves of maize seedlings. Under a moderate water stress, pretreatment with 100 μM ABA caused an obvious reduction in the content of catalytic Fe, which is critical for H_2O_2 -dependent $\cdot\text{OH}$ production, and significant increases in the activities of antioxidant enzymes and the contents of non-enzymatic antioxidants, and then significantly reduced the contents of dehydroascorbate (DAsA) and oxidized glutathione (GSSG), which are considered as indices of oxidative stress, and the degrees of oxidative damage to lipids (expressed as MDA content) and proteins (in terms of carbonyl groups) in leaves induced by the moderate water stress. Pretreatment with an ABA biosynthesis inhibitor, tungstate, significantly suppressed the accumulation of ABA induced by water stress, reduced the enhancement in the capacity of antioxidant defense systems, and resulted in an increase in catalytic Fe, DAsA and GSSG, and oxidative damage in the water-stressed leaves. These effects were completely prevented by addition of ABA, which raised the internal ABA content. These data indicate that ABA plays an important role in the induction of antioxidant defense against oxidative stress in plants under water stress and non-stressed conditions.

Time-course analyses of ABA content, the production of reactive oxygen species (ROS), and the activities of antioxidant enzymes in water-stressed leaves showed that a significant increase in the content of ABA preceded that of ROS, which was followed by a marked increase in the activities of these antioxidant enzymes. Pretreatment with an ABA biosynthesis inhibitor, tungstate, significantly suppressed the accumulation of ABA, and also reduced the increased generation of ROS and the up-regulation of these antioxidant enzymes in water-stressed leaves. A mild oxidative stress induced by paraquat, which generates O_2^- and then H_2O_2 , resulted in a significant enhancement in the activities of antioxidant enzymes in non water-stressed leaves. Pretreatment with some ROS scavengers, such as Tiron and dimethylthiourea (DMTU), and an inhibitor of NAD(P)H oxidase, diphenyleneiodonium (DPI), almost completely arrested the increase in ROS and the activities of these antioxidant enzymes induced by water stress or ABA treatment. These data suggest that water stress-induced ABA accumulation triggers the increased generation of ROS, which in turn leads to the up-regulation of the antioxidant defense system.

Under water stress, the ABA-dependent generation of ROS originates, at least in part, from the plasma membrane NADPH oxidase pathway. Treatments by exogenous ABA or osmotic stress significantly increased the activity of plasma membrane NADPH oxidase and the production of leaf O_2^- . Pretreatment with three different inhibitors of NADPH oxidase (diphenylene iodonium, imidazole and pyridine) or an inhibitor of ABA biosynthesis (tungstate) reduced the increase in the activity of plasma membrane NADPH oxidase and the production of leaf O_2^- , and the capacity

of antioxidant defense systems mediated by ABA. The inhibitory effects above caused by tungstate were reversible by exogenously applied ABA. These data indicate that NADPH oxidase is involved in the ABA- and water stress-induced production of ROS and antioxidant defense systems, and water stress-induced ABA accumulation plays an important role in the regulation of NADPH oxidase activity.

Ca^{2+} was also shown involved in the ABA signal transduction in plants. The increases in the activity of NADPH oxidase, the production of ROS, and the capacity of antioxidant defense induced by ABA were blocked by the pretreatment with Ca^{2+} chelator EGTA or Ca^{2+} channel blockers La^{3+} and verapamil. Treatment with Ca^{2+} also significantly induced the increases in NADPH oxidase activity, O_2^- production and the activities of the antioxidant enzymes, and the increases were arrested by the pretreatment with the NADPH oxidase inhibitors. The up-regulation in the activities of the antioxidant enzymes induced by oxidative stress by paraquat was suppressed by the pretreatment of Ca^{2+} chelator and Ca^{2+} channel blockers. Our data indicate that a cross-talk between Ca^{2+} and ROS that originate from plasma membrane-bound NADPH oxidase is involved in ABA signal transduction pathway leading to the induction of antioxidant enzyme activity, and Ca^{2+} functions in the upstream as well as downstream of ROS production in the signal transduction event in plants, suggesting the existence of intracellular networks rather than linear pathways in ABA signal transduction leading to the induction of antioxidant defense in plants.

Table of Contents

Declaration	i
Abstract	ii
Acknowledgements	iv
Table of Contents	v
List of Figures	xi
List of Abbreviations	xvi
Chapter 1 General Introduction -----	1
1.1 ROS Generation and Scavenging in Plants-----	1
1.1.1 The Chemistry of ROS-----	1
1.1.2 Sources of ROS in Plants-----	3
1.1.3 Oxidative Damage of ROS to Plants-----	4
1.1.3.1 Oxidative Damage to Lipids-----	5
1.1.3.2 Oxidative Damage to Proteins-----	7
1.1.3.3 Oxidative Damage to DNA-----	7
1.1.4 Antioxidant Defense Systems in Plants-----	8
1.1.4.1 Antioxidant Enzymes-----	9
1.1.4.2 Non-Enzymic Antioxidant Metabolites-----	12
1.2 Water Stress-Induced Oxidative Stress in Plants-----	13
1.2.1 Generation of ROS under Water Stress-----	13
1.2.2 Oxidative Damage Caused by Water Stress-----	16
1.2.3 Water Stress-Induced Antioxidant Defenses-----	19
1.3 ABA and Oxidative Stress-----	21
1.3.1 ABA-Induced ROS generation-----	22

1.3.2 The Expression of Antioxidant Genes Induced by ABA-----	23
1.3.3 The Effect of ABA on the Antioxidant Defense Enzymes-----	25
1.3.4 The Possible Mechanisms Involved in ABA-Induced Antioxidant Defense-----	26
1.4 The Objectives of this Study-----	30
 Chapter 2 ABA-Induced Oxidative Stress -----	33
2.1 Introduction-----	33
2.2 Materials and Methods-----	35
2.2.1 Plant Material-----	35
2.2.2 ABA Treatments-----	35
2.2.3 Assays of Antioxidant Enzyme Activities-----	36
2.2.4 Determination of Non-Enzymatic Antioxidants-----	37
2.2.5 Determination of Superoxide Radical, Hydrogen Peroxide and Catalytic Fe-----	38
2.2.6 Determination of Indices of Oxidative Damage-----	40
2.2.7 Statistical Analysis-----	41
2.3 Results-----	41
2.3.1 Effect of ABA on the Production of ROS and the Content of Catalytic Fe-----	41
2.3.2 Effect of ABA on Activities of Antioxidant Enzymes-----	43
2.3.3 Effect of ABA on Non-Enzymatic Antioxidants-----	47
2.3.4 Oxidative Damage to Biomolecules and Membranes-----	47
2.4 Discussion-----	51

Chapter 3 Role of Abscisic Acid in Water Stress-Induced Antioxidant

Defense -----	56
3.1 Introduction-----	56
3.2 Materials and Methods-----	59
3.2.1 Plant Material and Treatments-----	59
3.2.2 Determination of Leaf Relative Water Content-----	60
3.2.3 Determination of Superoxide Radical, Hydrogen Peroxide and Catalytic Fe-----	60
3.2.4 Enzyme Assays-----	60
3.2.5 Determination of Non-Enzymatic Antioxidants-----	61
3.2.6 Determination of Oxidative Damage and Electrolyte Leakage-----	62
3.2.7 ABA Analysis-----	63
3.2.8 Statistical Analysis-----	63
3.3 Results-----	63
3.3.1 Leaf Water Stress Status-----	63
3.3.2 Effects of ABA and Osmotic Stress on ROS and Catalytic Fe-----	64
3.3.3 Effects of ABA and Osmotic Stress on Antioxidant Enzymes-----	67
3.3.4 Effects of ABA and Osmotic Stress on Antioxidant Metabolites-----	70
3.3.5 Effects of ABA and Osmotic Stress on Oxidative Damage and Electrolyte Leakage-----	73
3.3.6 Effects of Tungstate on ABA, Antioxidant Systems and Oxidative Damage-----	75
3.4 Discussion-----	80

Chapter 4 Reactive Oxygen Species Induced by Abscisic Acid Triggers

Antioxidant Defense in Maize Leaves Exposed to Water Stress -----	85
4.1 Introduction-----	85
4.2 Materials and Methods-----	87
4.2.1 Plant Material and Treatments-----	87
4.2.2 Enzyme Assays-----	88
4.2.3 Determination of ROS-----	89
4.2.4 ABA Analysis-----	90
4.2.5 Statistical Analysis-----	90
4.3 Results-----	90
4.3.1 Effects of Water Stress on ABA, ROS and Antioxidant Enzymes-----	90
4.3.2 Effects of Pretreatment with Tungstate on ABA, ROS and Antioxidant Enzymes-----	93
4.3.3 Effects of Oxidative Stress on ABA, ROS and Antioxidant Enzymes---	95
4.3.4 Effects of DPI, Tiron and DMTU on Water Stress- and ABA- Induced Changes in ROS and Antioxidant Enzymes-----	99
4.4 Discussion-----	103

Chapter 5 Involvement of Plasma Membrane NADPH Oxidase in Abscisic

Acid- and Water Stress-Induced Antioxidant Defense -----	108
5.1 Introduction-----	108
5.2 Materials and Methods-----	111
5.2.1 Plant Material and Treatments-----	111
5.2.2 Isolation of Plasma Membranes-----	111

5.2.3 Determination of NADPH Oxidase Activity of Plasma Membranes----	112
5.2.4 Determination of Leaf O ₂ ⁻ Production-----	113
5.2.5 Enzyme Assays-----	113
5.2.6 Determination of Non-Enzymatic Antioxidants-----	113
5.2.7 Determination of Lipid Peroxidation and Electrolyte Leakage-----	113
5.2.8 ABA Analysis-----	114
5.2.9 Statistical Analysis-----	114
5.3 Results-----	114
5.3.1 NADPH Oxidase Activity and Superoxide Radical Production-----	114
5.3.2 Antioxidant Enzymes and Antioxidant Metabolites-----	117
5.3.3 Lipid Peroxidation and Electrolyte Leakage-----	121
5.3.4 Endogenous ABA Levels-----	125
5.4 Discussion-----	125

Chapter 6 Cross-Talk between Calcium and Reactive Oxygen Species in

Abscisic Acid-Induced Antioxidant Defense-----	130
6.1 Introduction-----	130
6.2 Materials and Methods-----	133
6.2.1 Plant Material and Treatments-----	133
6.2.2 Isolation of Plasma Membranes-----	133
6.2.3 Determination of NADPH Oxidase Activity of Plasma Membranes----	134
6.2.4 Determination of Leaf O ₂ ⁻ Production-----	134
6.2.5 Enzyme Assays-----	134
6.2.6 Statistical Analysis-----	134
6.3 Results-----	135

6.3.1 Involvement of Ca ²⁺ and NADPH Oxidase in ABA-Induced Antioxidant Enzyme Activity-----	135
6.3.2 Involvement of NADPH Oxidase in Ca ²⁺ -Induced Antioxidant Enzyme Activity-----	135
6.3.3 Involvement of Ca ²⁺ in Oxidative Stress-Induced Antioxidant Enzyme Activity-----	142
6.4 Discussion-----	146
Chapter 7 General Conclusion-----	150
References-----	153
Appendix-----	167
Curriculum Vitae-----	168
