Abstract

We explore a model for one-dimensional cutting and packing problem, which is based on the Gilmore and Gomory's approach. We improve on the approach in order to address the growth in the number of cutting patterns. In our model, new sets of variables are formed by using the digraph representation. Incidence matrix of digraph is then applied to formulate the configuration of the incremental patterns with side constraints. In addition, we modify our model to handle the generalized problem with different stock / bin sizes, prices and supplies considerations. A Strategy for reducing the variables and constraints in the programming is suggested when the problem size is huge. Computational results of the test cases obtained from the OR-Library and other resources will be reported. The results demonstrate the significant contributions of our model by the leveling off of solution times with the increase in problem size. We also introduce one optimal heuristics algorithm. While this is intuitively obvious, we provide a logical proof for completeness and specify the optimality conditions. This algorithm can be used for pre-processing of the packing before the formulation of our model. As a result, the number of cutting patterns can be reduced and solution times can be improved. Furthermore, we modify our model to handle different types of Knapsack Problem. We attempt to explore the applicability of our approach/formulation to a different type of problem that has similar combinatorial requirements.

Abstract	ii
Acknowledgements	iii
Table of Contents	iv
List of Figures	vii
List of Tables	viii
1 Introduction	1
1.1 Background	1
1.2 Motivation	3
1.3 Contributions of the Thesis	4
1.4 Outline of the Thesis	5
2 Common Approaches to the One-Dimensional Cutting and Packing Problem	6
2.1 Basic Problem Statement	6
2.2 Heuristics	7
2.3 Genetic Algorithm	8
2.4 Gilmore and Gomory's Approach and Related	9
2.4.1 Column Generation	10
2.4.2 Branch-and Bound	10
2.4.3 Relaxation	11

2.4.4	Cutting Plane	11
2.5	Dyckhoff's Model	12
2.6	Arc Formulation	13
3	Literature Review - Development of Cutting and Packing Problem	14
4	One-Dimensional Cutting and Packing Problem with Single Stock/Bin Size - Solution Approach	18
4.1	Graph Approach Modeling	18
4.2	Optimal Heuristics	23
4.3	Computational Results	27
4.3.1	Introduction of Test Instances	27
4.3.2	Performance Analysis and Comparison	27
4.4	Concluding Remarks	36
5	One-Dimensional Cutting and Packing Problem with Multiple Stock/Bin Sizes - Solution Approach	42
5.1	Graph Approach Modeling	43
5.2	Problem Reduction	45
5.3	Computational Results	46
5.3.1	Introduction of Test Instances	46
5.3.2	Performance Analysis	47
5.4	Concluding Remarks	68
6	Knapsack Problems - Graph Approach Modeling	70
6.1	Simple Knapsack Problem	70
6.2	Multiple Knapsack Problem	74
6.3	Multiple Subset-Sum Problem	75
6.4	Multiple Change-Making Problem	76
6.5	Concluding Remarks	77

7 Summary	78
7.1 Introduction	78
7.2 Methodology	79
7.3 Conclusion	81
