ABSTRACT

This thesis reports numerical computational results obtained for doped NaCl clusters, $\text{ImNa}_n\text{Cl}_{n+2}$ with $n = 1 - 8$. The impurity ion, Im, carries +2 charges but may have various sizes. A new optimization procedure has been designed and used to search for their stable configurations, which differ drastically from the crystal structure in the bulk. From the optimization results, the structures and dynamical response of doped clusters can be studied.

The structural analyses of the calculated optimum configurations are divided into two parts: statics and dynamics. The statics part concerns structural quantities such as the most possible separation, total dipole moment and total interaction energy. Such information tells us how the geometrical and symmetry properties of the clusters are modified by the presence of impurities. The dynamics part of the analysis focuses on vibrational excitations which contribute enormously to the free energy of the clusters at finite temperatures. Vibrational frequencies and density of states are calculated for doped clusters with impurity ions of different sizes. We can study how clustering around a guest ion opens up new channels for the disposal of vibrational energy of the guest. All this information is important for us in understanding the experimental results on melting transitions in clusters, that was found originally in computer simulations.

Contents

	Page
Chapter 1. Introduction	1
1.1. Background.....	1
1.2. Scope of Present Work.....	3
Chapter 2. Theory	7
2.1. Optimization.....	7
2.1.1. NP-Complete Problems.....	9
2.1.2. Lennard-Jones Clusters.....	13
2.1.3. Ionic Clusters.....	17
2.1.4. Optimization Procedures.....	22
2.2. Structural Analysis.....	27
2.2.1. Statics.....	28
2.2.1.1. Radial Distribution Function.....	28
2.2.1.2. Dipole Moment.....	34
2.2.2. Dynamics.....	37
2.2.2.1. Dynamical Matrix.....	39
2.2.2.2. Vibrational Density of States.....	43
Chapter 3. Results and Discussion	47
3.1. Optimization.....	47
3.1.1. Lennard-Jones Clusters.....	48
3.1.2. Ionic Clusters.....	54
3.1.3. Critiques on Optimization Procedures.....	62
3.2. Optimized Doped NaCl Clusters Structures.....	68
3.2.1. Total Interaction Energy.....	72
3.2.2. Dipole Moment.....	95
3.2.3. Radial distribution Function.....	96

3.3. Vibrational Spectra	115
3.4. Density of States	122
Chapter 4. Conclusions	159
4.1. Optimization.....	159
4.2. Optimized Doped NaCl Clusters Structures.....	162
4.3. Vibrational Frequencies and Density of States	163
4.4. Proposed Future Work	165
Appendix.....	168
References.....	174
