## Acknowledgement

This thesis is based upon my own work in the Department of Chemistry under the supervision of Dr. Rick W. K. Wong from September 1994 to September 1996. I would not finish my studies without the assistance of co-workers in our research group and all technicians in our department.

I would like to express my deepest thanks to my supervisor, Dr. Rick W. K. Wong. I first acquire research experience from him. He has given me a lot of valuable advice and encouragement. Under his supervision, I have learned a lot of laboratory techniques and synthetic pathways during the past two years.

Mr. Hui Kin Ning and Dr. Ians Williams of the Hong Kong University of Science and Technology, Mr. Xue Fung and Prof. Thomas C. W. Mak of the Chinese University, Dr. W. T. Wong of the University of Hong Kong are specially thanked for their help in determining crystal structures by X-ray diffraction. I also express my thanks to Mr. C. L. Chan for his help in Mass Spectroscopy.

I would like to thank the Hong Kong Baptist University and the Hong Kong Research Grant Council for the financial support.

Deepest thanks go to my co-workers, Dr. Jiang Tao, Mr. Chen Yang, Miss Zhang Li Lu and Mr. Sun Chaode for their helpful suggestions and encouragement.
