Abstract

The tumor suppressor protein, p53, and its downstream effectors play a crucial role in mediating proper cellular process of repair or death in response to a wide variety of stress stimuli. Cell fate varies, depending on the type of stress, its level and the genetic background of individual cell types. In this study we quantify the phenotypic response to DNA damage, and investigate how the response process is differentially regulated by the p53 pathway dynamics. We induced DNA damage in selected cultured mammalian cell lines by using a DNA-damaging drug, etoposide. By using quantitative time-lapse microscopy, we tracked dynamics of individual cells in real time, acquiring information with respect to protein kinetics and cellular processes that are beyond ensemble approaches. Our results showed that when being treated with low dosage of etoposide, the majority of cells exhibited continuous oscillation of p53 followed by cell-cycle arrest, while at high dosage cells tended to die rapidly with monotonic elevation of p53. In contrast to common hypothesis, we found the bimodal p53 dynamics did not control phenotypic response by modulating p53's transcriptional activation as DNA damage increased. Our data so far showed that the differential p53 dynamics regulate the alternative cell fate of arrest vs. death mainly by modulating p53's direct pro-death activity in the cytoplasm in a damage-dose dependent manner.

Table of Contents

Declaration	i
Abstract	ii
Acknowledgements.....	iii
Table of Contents.....	iv
List of Figures.....	vii
List of Abbreviations	viii
Chapter 1 Introduction	1
1.1 DNA damage responses	1
1.2 Function and regulation of p53	2
1.3 Regulation of p53 in response to double strand breaks.....	5
1.4 Cell fate response regulated by p53	6
1.5 Aim of study	8
Chapter 2 Materials and methods	9
2.1 Cell culture	9
2.1.1 Cell lines	9
2.1.2 Generation of fluorescent reporter cell line	9
2.1.3 Selection of isogenic clone.....	11
2.1.4 Gene knockdown by RNA interference (RNAi)	11
2.2 Chemicals	12
2.3 Protein analysis and detection	12
2.3.1 Cell harvest and lysis	12
2.3.2 Sodium dodecyl sulphate-polyacrylamide gel electrophoresis	13

2.3.3	Western Blot (protein gel blot).....	13
2.3.4	Antibodies	14
2.4	Subcellular fractionation	15
2.5	Time-lapse microscopy	16
Chapter 3 p53 dynamics and cell fate response to DNA-damaging agent, etoposide		17
3.1	Differential p53 dynamics in response to various doses of DNA damage.....	17
3.2	Correlation between single-cell p53 dynamics and cell fate	22
3.3	Cellular mechanisms of the bimodal dynamics of p53	24
3.4	Discussion.....	30
Chapter 4 Differential regulation of p53's dual function by bimodal p53 dynamics		32
4.1	Introduction	32
4.2	Results	33
4.2.1	Role of p53's transcriptional activity in modulating differential cell fate	33
4.2.2	Role of p53's direct pro-death activity in modulating differential cell fate	37
4.3	Discussion.....	39
Chapter 5 Cell-line variation in p53 pathway-mediated DNA damage response		41
5.1	Introduction	41
5.2	Results	42

5.2.1 Cell line comparison of response to high and low concentration of etoposide in U2OS and A549 cells	42
5.2.2 Expression profile of p53 pathway proteins in A549, HeLa, RPE, OVCAR5 and HCT116 under high and low dosage of etoposide	45
5.3 Discussion.....	50
List of References	51
Curriculum Vitae	54
